SDAC timing: consultation of market participants
on any planned process changes is a must

MESC meeting – 5 July 2023

SDAC evolution to 15 min is putting pressure on the timing

After the MCCG on 19 June 2023, market participants have a partial view on the constraints faced by NEMOs and TSOs with the move to 15-min MTU in SDAC.

These constraints have a worrying impact on SDAC timings.

What do we propose ?

- 1. The timing impact of 15-min MTU should be subject to clear information and a EU-wide public consultation if changes need to be made**
→ Modifying any deadline/timing in the SDAC process has important impact
- 2. Concerning the book reopening/second auction process**
 - **An assessment is needed** to bring substance to the debate: risk of decoupling vs. risk of operational errors
 - **For the future, a short consultation within MCCG can be organised** in case of other urgent need to change parameters
