

32nd GC ESC meeting – Project Inertia – Phase II

João Moreira (Project manager)

1 December 2023

Project Inertia Phase II - Status

□ Main Goals

- **Update** the analysis performed in **the report “Frequency stability in long term scenarios and relevant requirements”**
- **Push forward the analysis of the impact of system splits** on the future “low inertia” configuration of the Continental Europe Synchronous Area
- **Engage internally and externally** on the Project Inertia study findings and **on criteria defining system resilience against system splits**

□ Project Milestones

- Update results and solution measures – [Published report](#)
 - Stakeholders Webinar held 27 November 2023

- Project conclusions on the approach to a more resilient system – **Ongoing work**
 - **Next steps:** Presentation and debate of first results during second quarter of 2024
 - Intended system resilience against system splits and corresponding kinetic energy needs
 - Implementation roadmap (step-by-step and pursuing non-regret and adaptable solutions)

 **Thank you!**
