

TOP.5.b - Grid Forming capability report

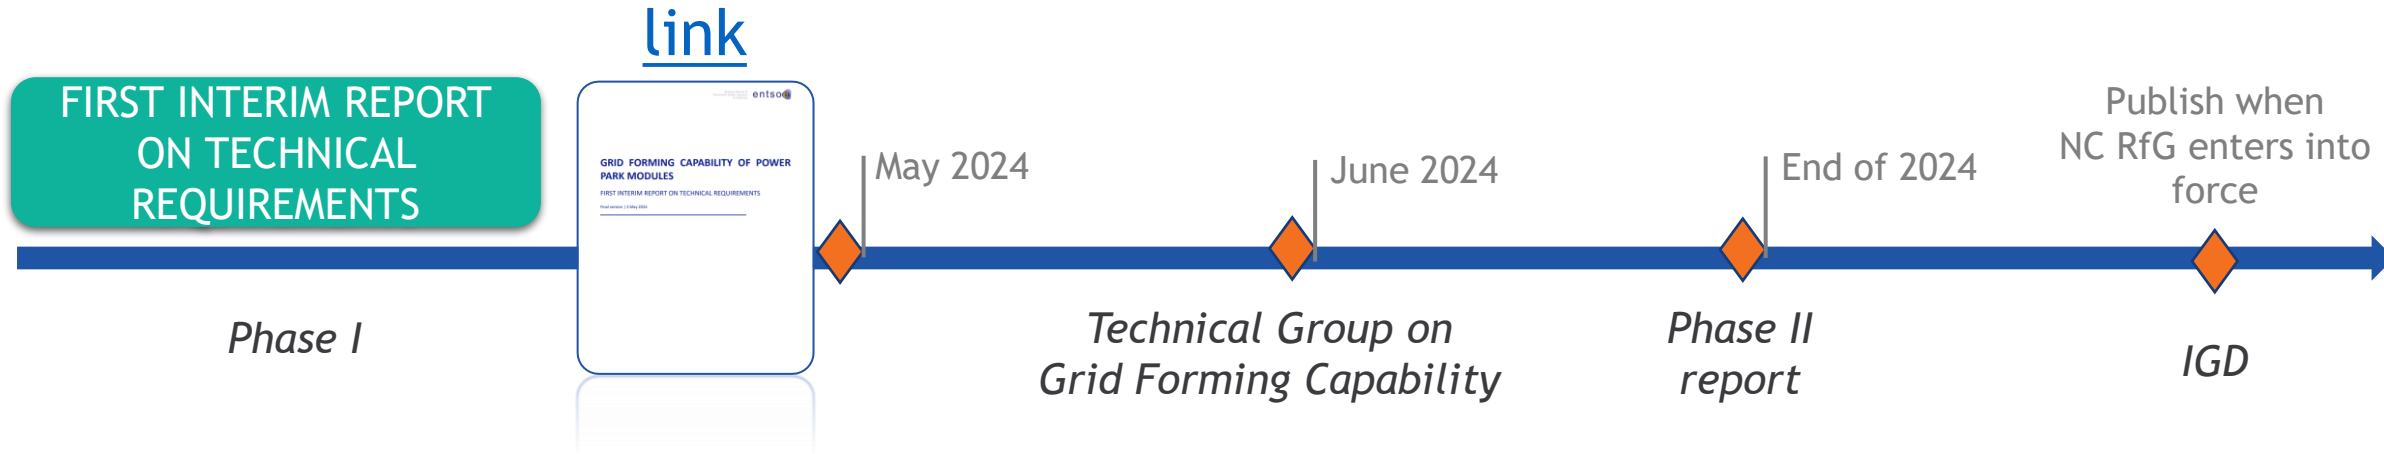

27 June – GC ESC in Brussels

Mario Ndreko (ENTSO-E) – StG CNC convenor

TOP.5.b - Grid Forming capability report

Technical Group on Grid Forming Capability

The objective of the Technical Group is to provide **recommendations on the exhaustive technical requirements of GFM requirements for PPMs**, while remaining independent of the specific controller implementation and OEM intellectual property.

- The Technical Group is **NOT a drafting team** for a future IGD but rather a technical group under ENTSO-E convenorship, to develop a common understanding among relevant stakeholders on grid forming technical requirements.
- These technical requirements are intended to describe the GFM capabilities of PPM of type B, C and D.
- The future drafting of a grid forming IGD will benefit for such **cooperation of stakeholders**
