# Update on the prioritisation of main projects

MESC – 9 March 2023

# Our principles for projects prioritisation

# Projects prioritization: three steps

## Keep going and improve transparency/justification

- Full transparency on day-ahead and intraday capacity calculation methodologies and market coupling
- Minimum cross-zonal capacities offered to the market
- Completeness and data quality on the Transparency platform and JAO

## Continue developing and complete project ensuring transparency

- Finer granularity (15 min) in intraday and balancing, closer to real time
- Improve intraday capacity calculation in the framework of flow-based
- One ID auction after capacity recalculation
- Longer allocation in forward markets
- Advanced hybrid coupling
- Redispatch and countertrading

## Put on hold / postpone or (re)assess

- Finer granularity (15 min) in day-ahead
- Non-uniform pricing
- Two other intraday auctions
- Flow-based calculation and allocation of LTTRs
- Co-optimization and other types of cross-zonal capacity reservation for balancing
