

Update on the prioritisation of main projects

MESC – 10 May 2023

Our reactions on projects prioritisation

ACER slides are a good starting point for a tripartite discussion (ACER-MSCS-MPs) before a methodology is approved

Favorable market consensus (market participants / IEM needs) should be included in the indicators – more clarity needed on how to reconcile ACER-NEMOs/TSOs-MPs priorities

We support running the exercise at regional level too, and ensure consistency/feasibility

We question restricting the exercise to projects implementation from 2025 onwards only. If so, it should include forward and balancing projects too

On project lists definition, we recommend considering R&D projects with a broader perspective and including them too
