Co-optimisation

MESC meeting – 7 December 2023

Co-optimisation: the need to refocus

- Co-optimisation impact with 15 minutes market time unit: untested
- Bidding guide: antitrust polices prevent market participants detailed contribution

- Our proposals:
 - ✓ Co-optimization should be part of the projects prioritisation discussion between market participants, NEMOs, TSOs and ACER
 - ✓ Inter-MTU links required for all MTUs and all products
 - ✓ Highly complex conditional bids necessary to generate feasible auction results

Despite these improvements, bidding complexity not manageable for balancing/day ahead market participants and might lead to lower volumes offered to account for the uncertainty

The feature of iteratively offering all of the previously unused capacity is lost
